MapView: The interactive BCPAO map is accessible from the following places:

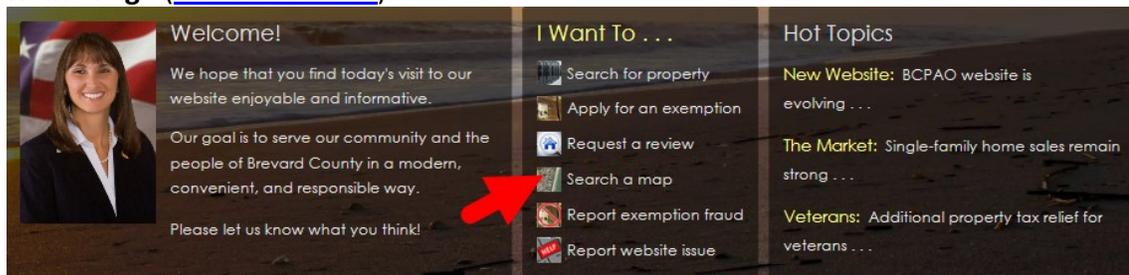

Menu: The menu is available on every page and contains links to all website content.

Slider: The navigation slider is available on every page and contains links to our most popular pages.

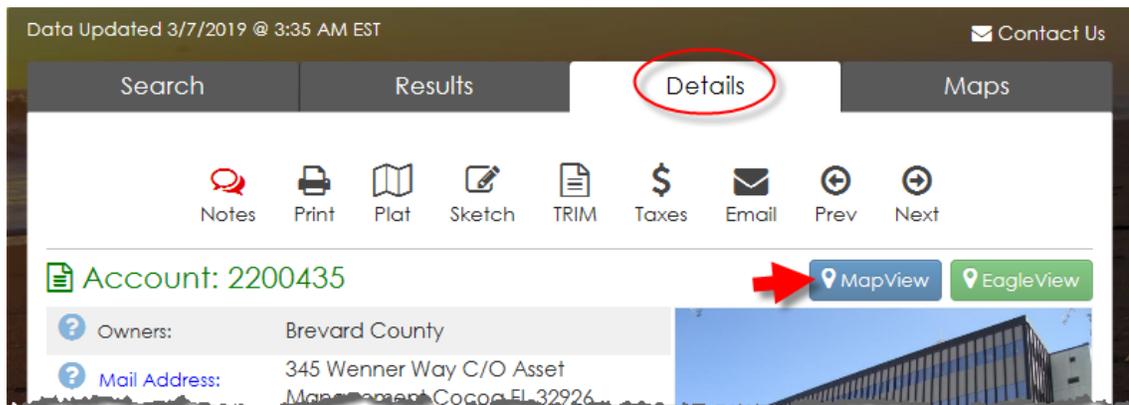

Home Page (www.BCPAO.us):

Footer: The Footer is available at the bottom of every page and provides links to a few of our common pages as well as links to other websites including city, county, state, and federal agencies not affiliated with BCPAO:

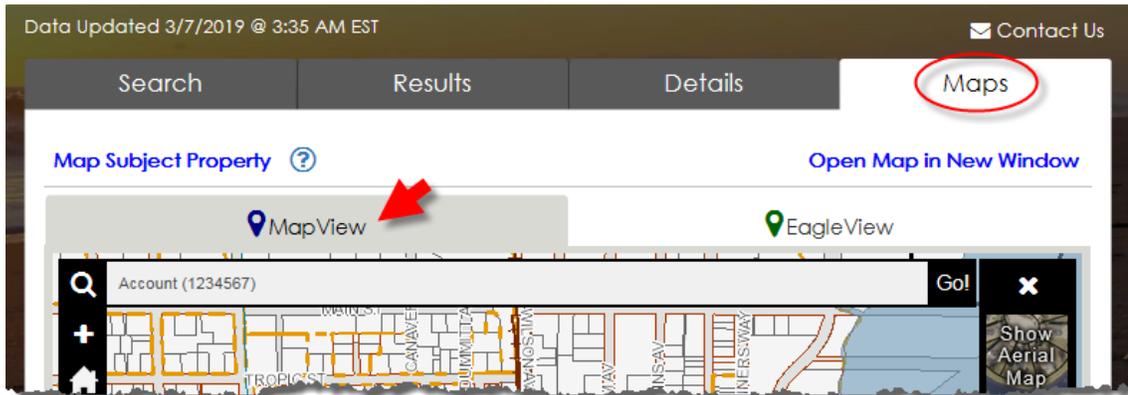

Real Property Search Details Tab: The Real Property Search **Details** tab is available after conducting a search for real property. The [MapView](#) link is available above the property photo.

Map Instructions

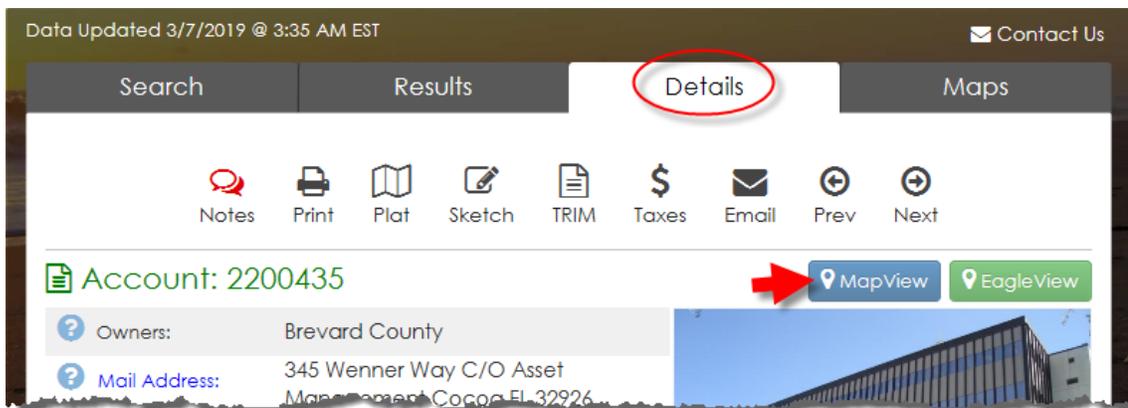

There are two ways to view the MapView: **INTEGRATED** on the Maps tab, and **FULL PAGE**:

Maps Tab: MapView is available on the **Maps** tab on the Property Search page:

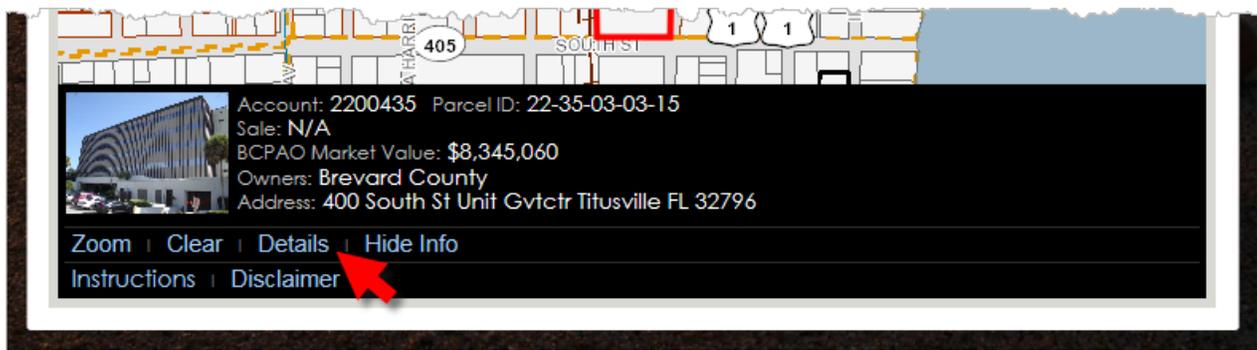

The **Maps** tab is primarily for showing the location of the subject property and its surroundings. The best way to use the **Maps** tab is to first search for real property and view **Details** (see [Real Property Search Instructions](#)).

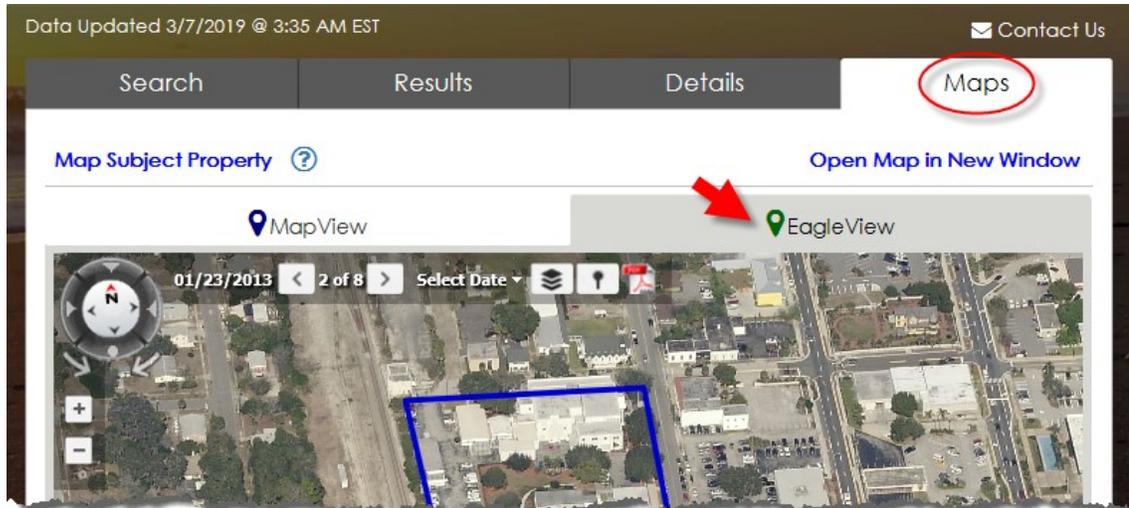

From the **Details** tab, click the [MapView](#) link:

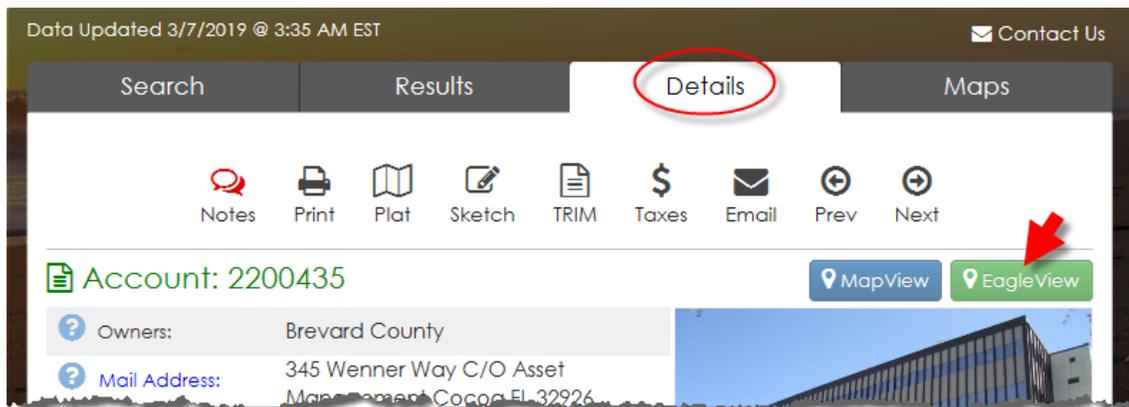

NOTE: If you select a new parcel in MapView from the **Maps** tab, clicking back to the **Details** tab will NOT automatically load details for the newly-mapped parcel (the parcel outlined in red). To show details for the newly-mapped parcel, click the **Details** link in MapView:

EagleView Map: From the **Maps** tab, you can view *oblique* aerial imagery by clicking  **EagleView:** (previously known as “Picto”):

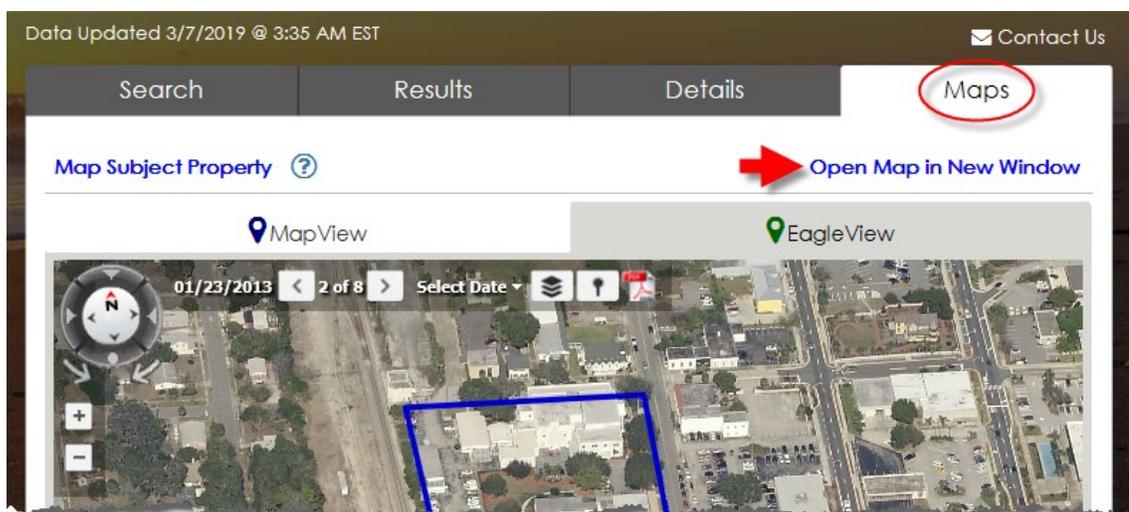

You can also access **EagleView** from the **Details** tab ([EagleView instructions](#)):

Integrated this way, you can click any of the other tabs (**Search**, **Results**, **Details**, **Maps**) without loading a new page.

Full-Page Map: The full page map is stand-alone and is not integrated with the Property Search tabs. It is accessible from various places (see page 2) including the **Maps** tab by clicking **Open Map in New Window**:

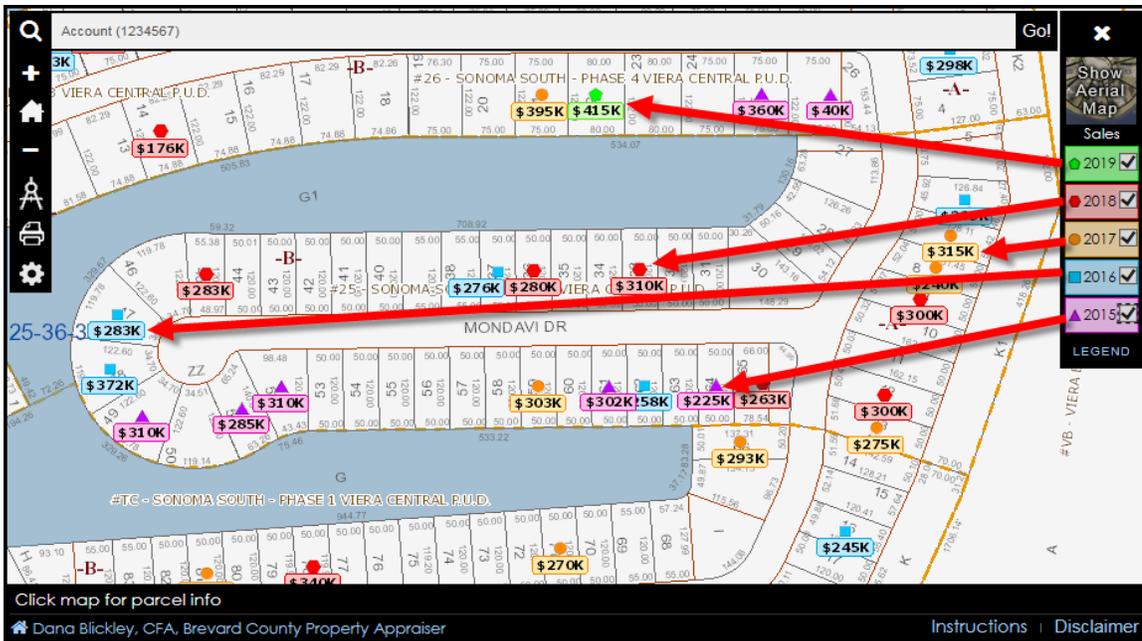

The remainder of these instructions shows how to use MapView whether it is in the Maps tab or full-page in its own window:

Pan & Zoom: “Zoom In” means to view the map closer. “Zoom Out” means to view the map farther. There are several ways to zoom the map. If you have a mouse with a scroll wheel, with your mouse cursor over the map, roll the mouse wheel forward to zoom in, and backward to zoom out. If you are not using a mouse, or if your mouse does not have a scroll wheel, click **+** to zoom in, or **-** to zoom out. Click **🏠** to zoom to Brevard County. If using a touch device, such as a phone or tablet, spread two fingers apart on the map to zoom in, or pinch two fingers together on the map to zoom out, (please view your touch device’s user guide for more information). “Pan” means to move the map to a new position in the view. If using a mouse, hold down your mouse’s left button, drag the map to a new position in your browser window, and then release the mouse button. If using a touch device, such as a phone or tablet, touch the map with one finger and slide your finger across the map in the direction you wish the map to go.

Level of Detail: As you zoom in, the map shows more detail. As you zoom out, the map shows less detail to reduce clutter. For example, to view parcel dimensions, zoom in close to the parcel. Also, when aerial imagery is on, certain details are hidden so that the aerial imagery is not blocked by labels, etc. (see [MapView – Street & Aerial Layers](#) below for how to toggle aerial imagery on/off.)

Sales: By default, the most recent year’s sales are visible on the map. Check any of the sale year checkboxes to hide or show years of sales. Sales in MapView and on the map ‘Info’ panel are the most recent transfer greater than \$100. (Not all transfers are sales, but transfers over \$100 are typically sales. Sales typically take 4-8 weeks before they appear on our website due to multi-agency research and processing and complexity of the ownership transfer.) The sales on the map are color-coded and shape-matched to match the **Sales** checkboxes:

Click **✕** to hide the layers panel, and **☰** to show the layers panel.

Settings: Click the  Settings button to open the **Settings** panel:

The **Settings** panel options will remain in place until you change them, or until you clear your browser history.

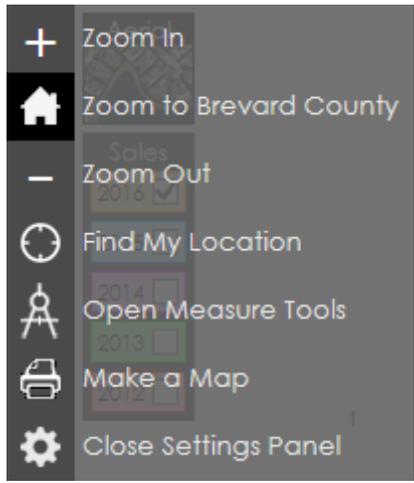

“When I click the map”:

- **Don't move the map:** The map will stay where it is when a parcel is clicked.
- **Pan the map to parcel:** The map will center the parcel on the map but will not zoom in or out.
- **Zoom the map to parcel:** The map will center the parcel on the map and zoom in or out to show the parcel's full extent. A drop-down list is available to choose how close or far to zoom the parcel.

Show scalebar: Check this checkbox to display the map scalebar.

Show Button Help Text: For desktop devices, the button help text panel opens when the mouse cursor is moved over any of the map tools. Uncheck this checkbox to prevent the button help text panel from opening.

Button Text Visible:

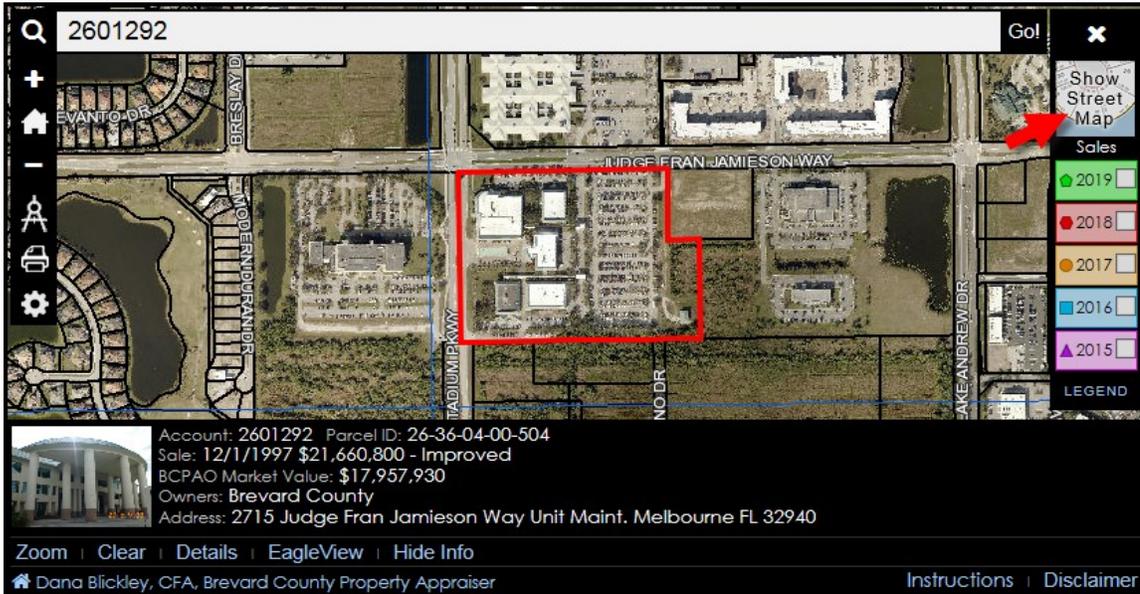

Button Text Hidden:

Hide/show button help text on **mobile** devices by clicking the **Help** button.

Click the **Show Street Map** button to replace the aerial imagery with details including streets, dimensions, and other labels.

Measure: MapView's measure tools enable you to measure area and distance, and get geographic coordinates. You can still pan and zoom the map while measuring without having to restart your measurement.

IMPORTANT: Measurements are approximate and for general informational purposes only. Please view our [disclaimer](#) for more information.

Click the **Measure** icon to open the Measure tool panel:

The  **Distance** tool is selected by default. Click the  **Area** button or the  **Coordinate** button to use one of those measurement tools.

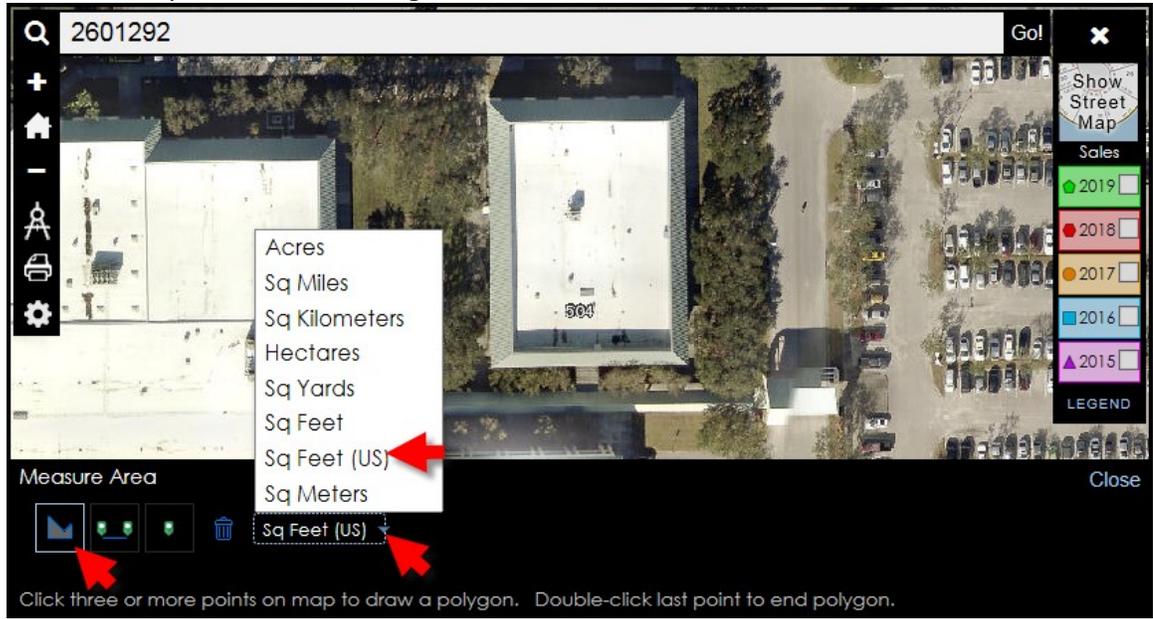

Instructions for each tool are posted at the bottom of the **Measure** tool panel:

Click the  **Clear** button to clear the measurement graphic from the map. Closing the **Measurement** panel automatically clears the measurement graphic from the map.

 **Measure Area:** Click three or more points on the map to draw a polygon. Double-click the last point to end polygon.

Click the dropdown list to change the measurement units:

Click points to form a polygon. The result is shown in the measurement panel:

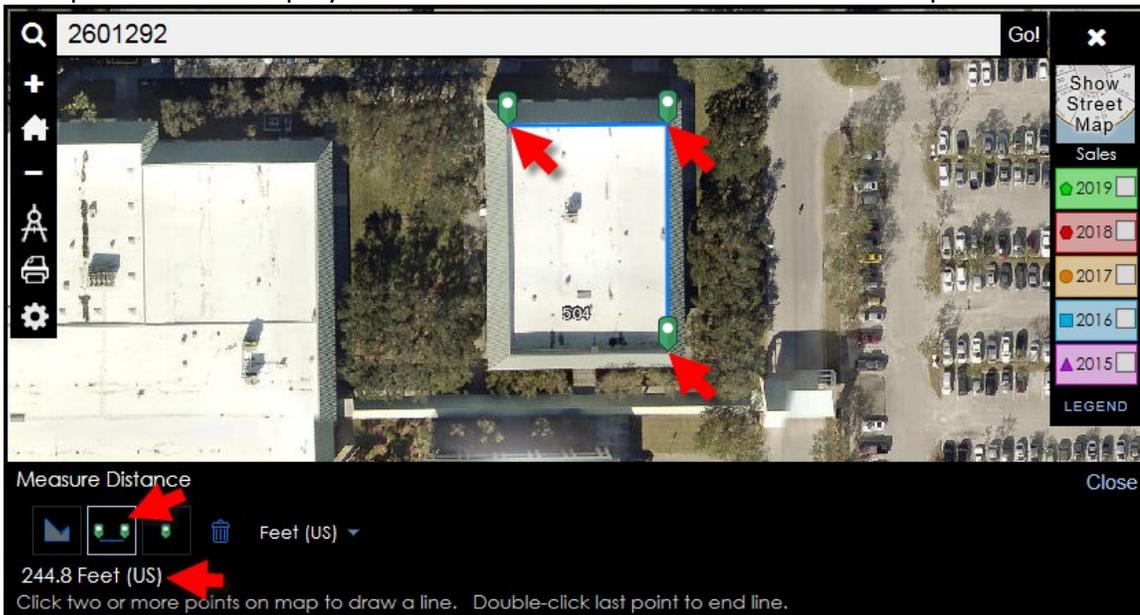

Measure Distance: Click two or more points on map to draw a line. Double-click last point to end line.

Click the dropdown list to change the measurement units:

Click points to form a polyline. The result is shown in the measurement panel:

Get Coordinate: Click a point on map to view geographic coordinate.

Click the drop-down list to select a coordinate system:

Get Coordinate

Latitude Longitude

28.247025 -80.736269

Click a point on map to view geographic coordinate.

Click a point on the map to retrieve geographic coordinate. The result is shown in the measurement panel:

Get Coordinate

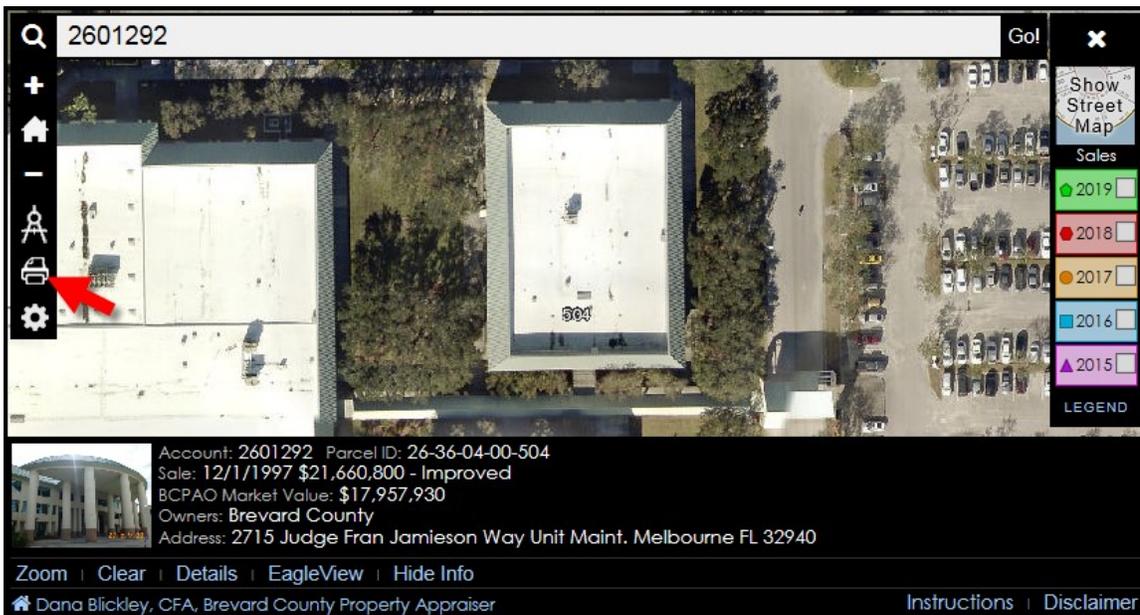

Latitude Longitude

28.247032 -80.735888

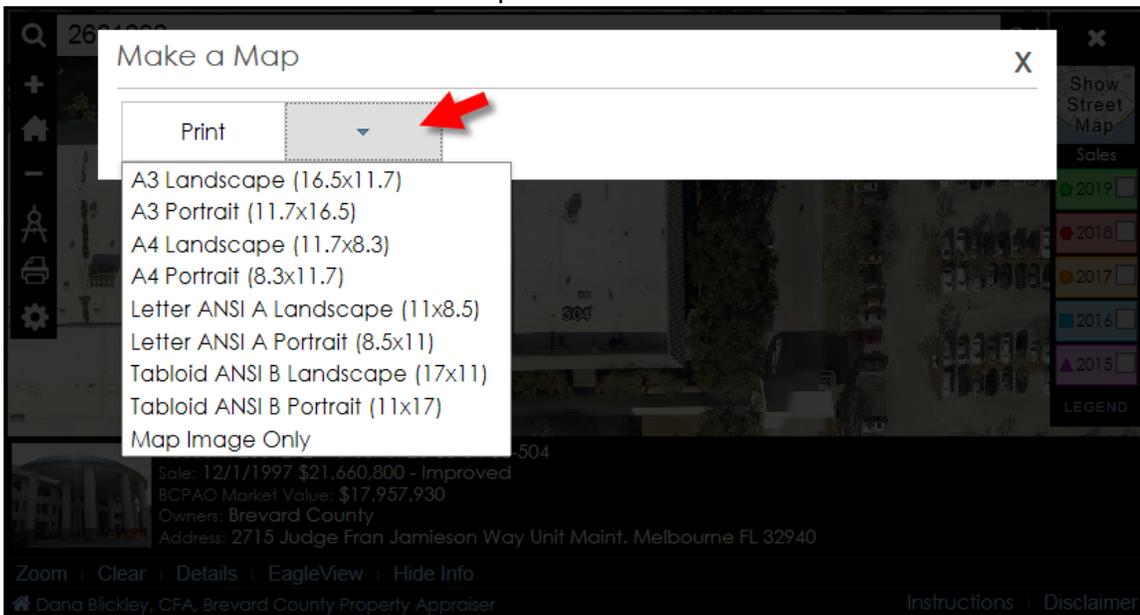

28.247041 -80.736306

Click a point on map to view geographic coordinate.

Make a Map: Click the **Printer** button to open the **Make a Map** panel:

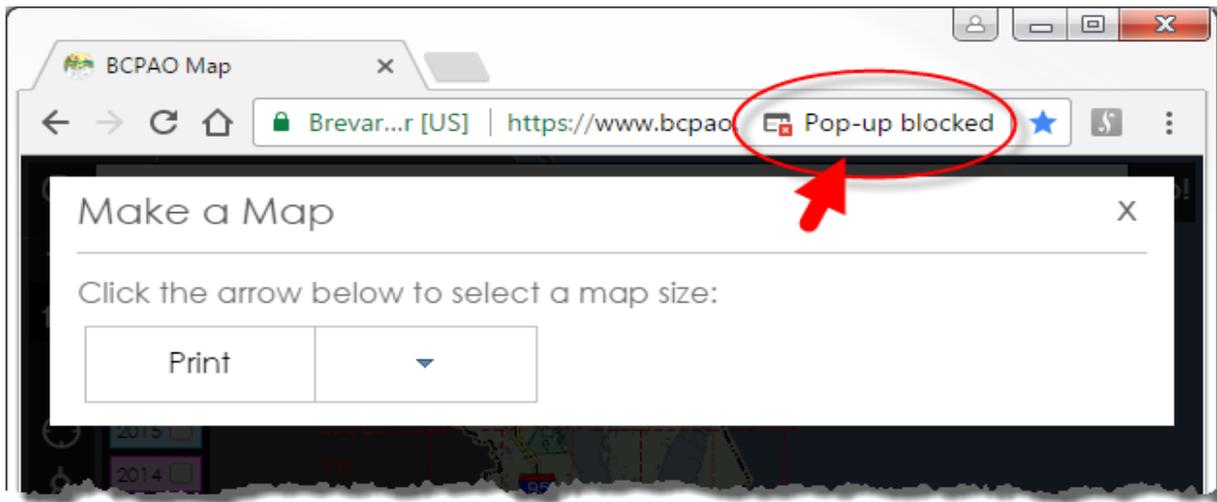

Click the arrow button to choose a map size:

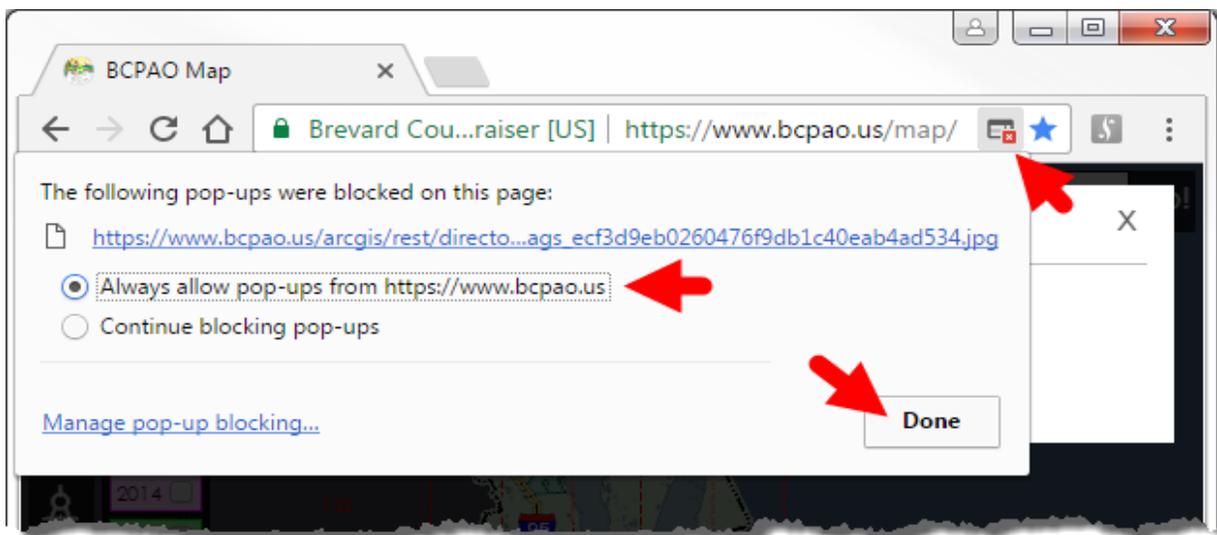

IMPORTANT: You must allow pop-ups from BCPAO to make a map. If your browser's pop-up blocker is on, below shows some examples of how to allow pop-ups from BCPAO in various browsers:

 BCPAO pop-up blocked by Chrome:

 Allow BCPAO pop-ups in Chrome:

 BCPAO pop-up blocked by Firefox:

 Allow BCPAO pop-ups in Firefox:

 BCPAO pop-up blocked by Internet Explorer:

 Allow BCPAO pop-ups in Internet Explorer:

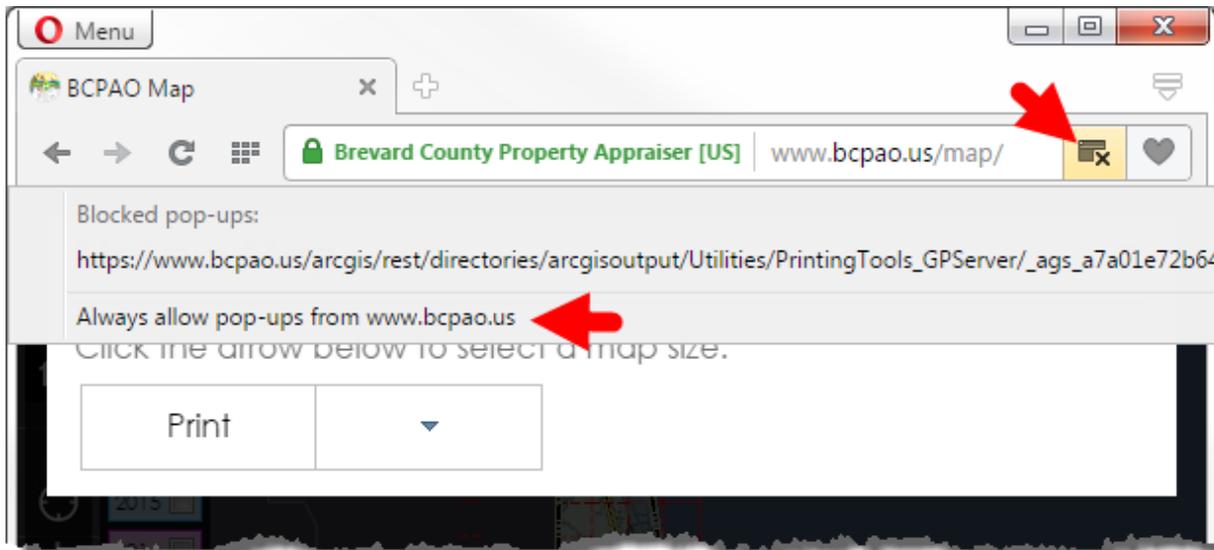

NOTE: Internet Explorer refreshes the page after pop-ups allowed. You'll need to restart the map print. This is default Microsoft browser behavior that BCPAO has no control over. You should only need to do this once.

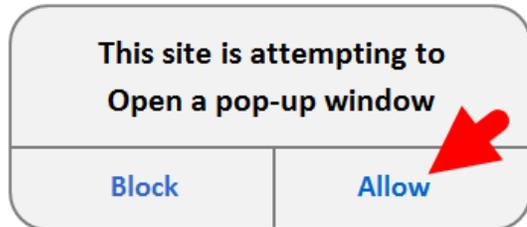

O BCPAO pop-up blocked by Opera:

O Allow BCPAO pop-ups in Opera:

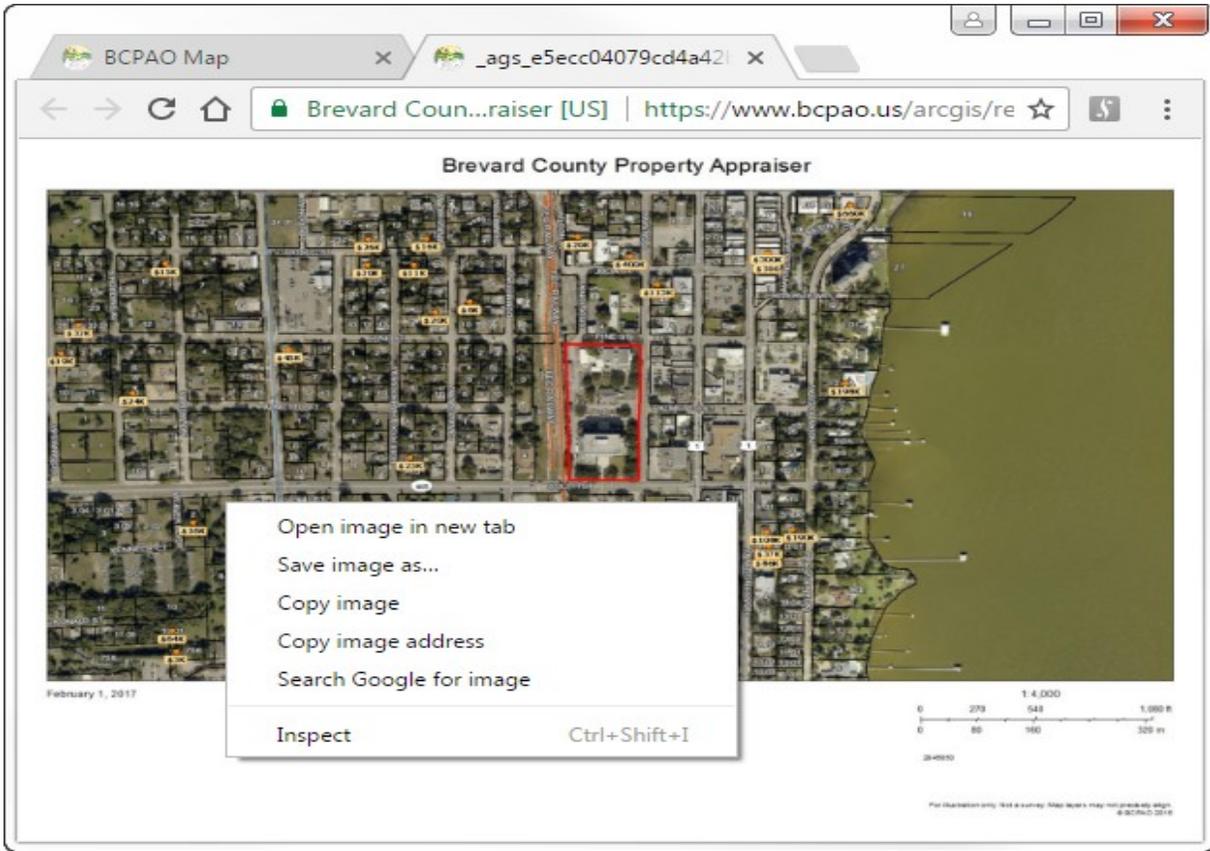

S Allow BCPAO pop-ups in Safari mobile:

NOTE: Some browsers require you to start the **Make a Map** process over after allowing BCPAO pop-ups.

When BCPAO pop-ups are allowed, a new window should open containing the map image that you can save, print, copy, email, etc. If using a mouse, right click the map image and choose from your browser's options. You can also use your browser's menu options. Below shows an example in Chrome:

Please [contact us](#) if to report any issues, or if you need further assistance with our website.
